About Souvera Intelligence Terminal

This Country Profile is produced by Souvera Intelligence Terminal — the institutional research platform for Africa and Caribbean market intelligence.

Souvera synthesizes macro data, sector scorecards, bilateral trade flows, market-access frameworks (AGOA, AfCFTA, CBI, CARICOM), and curated editorial intelligence into a single decision-grade view. Unlike static annual country briefs, Souvera profiles refresh from live data foundations and signal models as conditions evolve.

Subscribers use the terminal for country comparison, trade policy tracking, sector deep-dives, and on-demand PDF reports. This document mirrors the seven intelligence tabs — Overview, Economy, Sectors, Opportunity, Risk, Trade, and Reports — packaged for board packs, investment committees, and due diligence workflows.

- Live macro indicators with freshness timestamps
- Souvera Signal Scan — proprietary momentum synthesis
- Market access registry with AGOA / AfCFTA / regional status
- Sector scorecards (Strength · Growth · Attractiveness)
- Exportable institutional PDFs with quota-managed AI custom briefs

Terminal Capabilities

- Country Intelligence Map — 50+ markets with tiered depth
- Trade Policy Hub — AGOA, AfCFTA, CBI legislative tracking
- Insights Rankings — comparative market scoring
- Reports — template PDFs + AI custom intelligence briefs

02

Key Terms & Definitions

This glossary defines key institutions, economic indicators, and trade programs referenced in this Country Profile.

Nigeria sits within a complex landscape of multilateral institutions, regional trade blocs, and development finance channels. This report assumes no prior familiarity with local acronyms or global development architecture — every term below is explained for first-time investors and board-level readers.

Understanding these definitions helps interpret macro data, market-access status, and risk mitigation options in the sections that follow. Africa-focused frameworks (AGOA, AfCFTA, ECOWAS) appear throughout this profile. Souvera Intelligence Terminal surfaces live status for each framework in the country terminal Market Access tab.

IMF (International Monetary Fund)

A global institution that monitors economic stability, provides policy advice, and lends to countries facing balance-of-payments crises. IMF forecasts and program reviews are widely cited in sovereign and corporate credit analysis.

World Bank

Multilateral development bank focused on poverty reduction and infrastructure. Its Doing Business successor indicators, country economic updates, and project pipelines inform sector entry timing.

GDP (Gross Domestic Product)

The total value of goods and services produced within a country in a given period. GDP scale indicates market size; GDP growth signals expansion or contraction of economic activity.

FDI (Foreign Direct Investment)

Cross-border investment where a foreign entity establishes lasting interest in a local enterprise (greenfield, joint venture, or acquisition). FDI inflows signal international confidence in a market.

CPI / Inflation

Consumer Price Index measures average price changes for household goods and services. Elevated inflation erodes purchasing power and can pressure interest rates and currency stability.

FX / Exchange Rate

The price of one currency in terms of another (e.g., local currency per U.S. dollar). Exchange-rate movements affect import costs, export competitiveness, and the dollar value of local earnings.

AGOA (African Growth and Opportunity Act)

U.S. trade preference program granting eligible African countries duty-free access for thousands of product lines. Eligibility is subject to annual U.S. Presidential review and can be restored or suspended.

AfCFTA (African Continental Free Trade Area)

Pan-African agreement creating a single market of 54 countries and 1.3 billion consumers, with phased tariff elimination. Enables regional manufacturing hubs and cross-border supply chains.

ECOWAS (Economic Community of West African States)

Regional bloc of 15 West African nations promoting free movement of goods, services, and people. Membership provides duty-free regional trade and harmonized investment protocols.

CBI (Caribbean Basin Initiative)

U.S. preferential trade program for Caribbean Basin countries, allowing duty-free entry for many goods exported to the United States when eligibility criteria are met.

CARICOM (Caribbean Community)

Political and economic union of Caribbean states. The CSME (Caribbean Single Market and Economy) component supports regional labor mobility and services trade.

MIGA (Multilateral Investment Guarantee Agency)

World Bank Group agency providing political risk insurance against expropriation, currency inconvertibility, and breach of contract — commonly used to de-risk greenfield FDI.

DFC (U.S. International Development Finance Corporation)

U.S. government development finance institution offering loans, equity, and political risk insurance for projects in emerging markets, often alongside private capital.

Afreximbank (African Export-Import Bank)

Pan-African multilateral bank specializing in trade finance, export development, and intra-African trade facilitation. Key counterparty for AfCFTA corridor transactions.

Special Economic Zone (SEZ)

Designated geographic area offering tax holidays, streamlined customs, and repatriation guarantees to attract manufacturing and export-oriented investment.

Joint Venture (JV)

Partnership between a foreign investor and a local company sharing ownership, capital, and operational responsibility. JVs accelerate market access and navigate regulatory complexity.

Political Risk Insurance (PRI)

Coverage protecting investors against government actions such as expropriation, war, civil disturbance, and currency transfer restrictions. Offered by MIGA, DFC, and private insurers.

Letter of Credit (L/C)

Bank guarantee that a buyer's payment to a seller will be received on time and for the correct amount. Standard instrument in commodity and cross-border goods trade.

Souvera Signal Scan

Souvera's proprietary synthesis of macro momentum, FDI trends, inflation trajectory, and sector leadership — producing an actionable investment-window badge updated with terminal data.

S/G/A Scorecard

Souvera sector scoring framework: Strength (current competitive position), Growth (expansion trajectory), and Attractiveness (investment appeal). Scores run 0–100; higher indicates stronger positioning.

03

Geography & Location

Nigeria occupies a strategic position within Africa economic geography — a market profile designed for investors who may not yet know the country's location, scale, or demographic advantage.

Nigeria is part of Sub-Saharan Africa's frontier and emerging-market corridor, where AfCFTA continental integration is reshaping supply chains and manufacturing location decisions. The country connects West, East, or Central African trade routes depending on its coastal and land-border profile.

The administrative capital is Abuja, which hosts core policy institutions, while commercial hubs often concentrate financial services, logistics, and technology clusters. Understanding this urban hierarchy helps investors site operations, hire talent, and engage regulators.

With a population of 223.8M and economic output of $477.4B, Nigeria offers scale sufficient for consumer markets, labor-intensive manufacturing, and services expansion — subject to infrastructure and market-access conditions detailed later in this profile.

GDP Growth (2025) — Six consecutive quarters of accelerating growth

04

Country Introduction

Africa's Largest Economy

Nigeria is West Africa's economic powerhouse and Africa's most populous nation, with a rapidly growing technology ecosystem. Post-2023 reforms have unlocked sustained economic momentum, positioning it as a premier investment destination on the continent.

Nigeria entered sustained growth following 2023 currency reforms. Technology sector expansion and agricultural modernization are driving GDP acceleration, with inflation declining from peak levels.

Nigeria is profiled in Souvera's institutional intelligence coverage. FDI inflows $4.5B (2025) Technology & Software leading sector strength GDP growth is tracking at 3.3%. Technology & Software leads the sector scorecard by attractiveness. This document synthesizes macro indicators, sector positioning, market-access frameworks, and bilateral trade data for professional due diligence.

Executive Summary

Nigeria is profiled in Souvera's institutional intelligence coverage. FDI inflows $4.5B (2025) Technology & Software leading sector strength GDP growth is tracking at 3.3%. Technology & Software leads the sector scorecard by attractiveness. This document synthesizes macro indicators, sector positioning, market-access frameworks, and bilateral trade data for professional due diligence.

GDP (CURRENT USD)	GDP GROWTH	POPULATION
$477.4B	**3.3%**	**223.8M**

FDI NET INFLOWS	INFLATION (CPI)	FX RATE (LOCAL/USD)
$4.5B	**18.8%**	**1547.50**

Why Now — Key Factors

- 1. Economic Momentum: Six consecutive quarters of accelerating growth (2024-2025), driven by technology sector expansion (+15% YoY) and agricultural modernization. GDP growth of 6.2% in 2025 signals a structural shift toward sustained high performance.
- 2. Policy Stability: The Tinubu administration's economic reforms—currency unification, fuel subsidy removal, and tax reforms—have passed the volatility phase. Markets have adjusted, and policy continuity through 2027 is highly probable.
- 3. Demographic Dividend: Nigeria's youth bulge (median age 19.7 years) is maturing into a tech-savvy consumer class. Mobile internet penetration exceeds 75%, and digital payment adoption is accelerating at 35% annually.

05

Political Environment

Political environment assessment for Nigeria — governance quality, institutional stability, and security conditions that affect investment timelines and capital repatriation.

Nigeria's political landscape spans governance, security, corruption. For international investors, political risk is not abstract: it determines contract enforcement, license continuity, tax policy stability, and the security of personnel and assets on the ground.

Governance & Stability (MODERATE): Nigeria's democracy is mature (25 years, 7 peaceful transitions), but challenges persist: 2027 presidential election watchpoint, security issues (Boko Haram, banditry), corruption rank 145/180. Souvera monitors election cycles, security hotspots, and governance indicators alongside macro data because political shocks often precede currency and FDI volatility.

Private sector resilience: Nigerian companies (Dangote, BUA) have operated through multiple volatility cycles

Governance & Stability

MODERATE

Nigeria's democracy is mature (25 years, 7 peaceful transitions), but challenges persist: 2027 presidential election watchpoint, security issues (Boko Haram, banditry), corruption rank 145/180.

Mitigants: Strong institutions (CBN independence); IMF/World Bank oversight

06

Economic Overview

Economic overview for Nigeria — macro scale, growth trajectory, and price stability based on World Bank, IMF, CBN.

This section summarizes Nigeria's macroeconomic performance using official and multilateral data sources (World Bank, IMF, CBN). Indicators include GDP scale and growth, inflation, foreign direct investment, population, and exchange-rate dynamics — the core variables that drive sovereign risk pricing and corporate valuation multiples.

Reflecting ongoing macro adjustment post-2023 currency reform. Investors should read headline metrics alongside the multi-year trajectory in the indicator panel — single-year snapshots can mislead when reforms or currency moves create base effects.

Nigeria's GDP expanded from $598.6B (2019) to $477.4B (2024), a -20% increase over five years. The 2023 currency reform initially compressed GDP in dollar terms, but the 2024–2025 rebound was driven by technology sector growth (+15% YoY) and oil production recovery.

Growth reached 3.3% in 2024 — the strongest performance since 2014, driven by technology (+15% YoY), agriculture (+4.2% YoY), and services (+7.1% YoY). Upgrade to Business for GDP growth forecasts.

The naira depreciated following the 2023 exchange rate unification. Volatility has stabilized since Q4 2024 under a managed float policy.

GDP (CURRENT USD)	GDP GROWTH	POPULATION
$477.4B	**3.3%**	**223.8M**
FDI NET INFLOWS	**INFLATION (CPI)**	**FX RATE (LOCAL/USD)**
$4.5B	**18.8%**	**1547.50**

Indicator Trajectory

- GDP growth: -6.4% (2019) → 3.3% (2024)
- GDP scale: $599B → $477B over 6 years
- Inflation 18.8% (2024) — declining from 2023 peak

07

Trade & Key Sectors

Trade and sector analysis for Nigeria — how the country connects to global and regional markets, and where export-oriented investment can capture preferential access.

Nigeria recorded approximately $38.2B in goods exports and $24.5B in imports in the latest Souvera trade registry refresh. Bilateral flows, AGOA restoration opportunity, regional integration. Bilateral concentration matters: top partners include China (34%), United States (13%), European Union (18%) shape currency earnings, supply-chain dependence, and geopolitical exposure.

Trade performance is only half the story. Preferential frameworks — AGOA, AfCFTA, ECOWAS, CBI, or CARICOM — determine whether manufactured and agricultural exports enter major markets at reduced or zero duty. Investors should align product mix and origin rules with active agreements.

Sector scorecards below rank Strength, Growth, and Attractiveness (S/G/A) for each vertical Souvera tracks. These scores synthesize terminal data, editorial intelligence, and comparative regional benchmarks — helping investors prioritize sectors before committing diligence resources.

EXPORTS	IMPORTS
$38.2B	**$24.5B**

PARTNER	SHARE
China	34%
United States	13%
European Union	18%

Regional Trade Frameworks

Regional trade frameworks define duty treatment, rules of origin, and dispute mechanisms for cross-border goods and services. Each agreement below includes a plain-language summary of what it means for exporters and manufacturers seeking market access.

AGOA

U.S. preferential market access · eligibility subject to annual Presidential review The African Growth and Opportunity Act allows qualifying exports to enter the United States duty-free when a country is certified eligible — subject to annual U.S. Presidential review.

AfCFTA

54 nations · 1.3B consumers · 90% tariff elimination by 2030 The African Continental Free Trade Area creates a single market of 54 countries, phasing out tariffs on 90% of goods and enabling regional manufacturing and distribution strategies.

ECOWAS

15 West African nations · 350M people · duty-free regional trade The Economic Community of West African States provides duty-free trade among 15 member nations and harmonized investment protocols for West African operations.

Trade Finance Channels

Trade finance instruments bridge the gap between shipment and payment — essential when counterparties span multiple jurisdictions. The channels below are commonly used for AfCFTA, ECOWAS, and bilateral export corridors.

- Afreximbank TRADAR-style supply chain finance for AfCFTA corridors
- DFC/MIGA political risk coverage for cross-border manufacturing exports
- ECOWAS regional L/C facilitation via partner banks

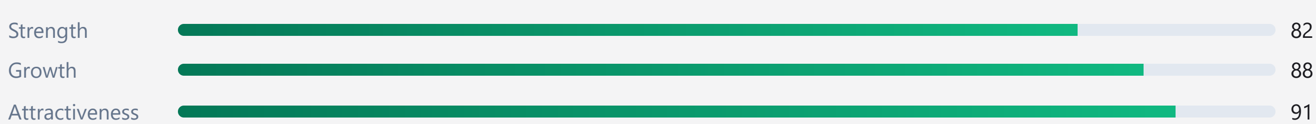
Key Sectors — Scorecard

The Souvera sector scorecard ranks verticals on Strength (current competitive position), Growth (expansion trajectory), and Attractiveness (investment appeal). Scores run 0–100. Higher scores indicate stronger positioning relative to regional peers. Use this section to shortlist sectors before deep due diligence.

Technology & Software

S 82 · G 88 · A 91

Nigeria leads Africa in tech innovation with 400+ funded startups, $2B+ VC investment, and global success stories like Flutterwave, Paystack, and Andela.



Agriculture & Food Processing

S 74 · G 68 · A 79

Nigeria is Africa's largest agricultural producer, cultivating 70M+ hectares with key exports including cocoa, cashew, sesame, and cassava. $90B sector employing 35% of the workforce.

Strength	74
Growth	68
Attractiveness	79

Energy & Power

S 76 · G 72 · A 85

Nigeria holds Africa's largest natural gas reserves (209 TCF), 37B barrels of proven oil reserves, and rapidly expanding renewable energy capacity (solar, hydro).

Strength	76
Growth	72
Attractiveness	85

Manufacturing & Textiles

S 68 · G 64 · A 73

Nigeria's manufacturing sector produces $50B+ in annual output across cement, steel, textiles, automotive, and consumer goods. Growing export capacity to U.S. and regional markets.

Strength	68
Growth	64
Attractiveness	73

Mining & Natural Resources

S 58 · G 76 · A 88

Nigeria holds untapped reserves of lithium, tin, coal, gold, and rare earth elements. $2B mining sector with high growth potential for battery minerals and strategic metals.

Strength	58
Growth	76
Attractiveness	88

Market Access Status

Market access status tracks live eligibility for preferential trade programs — including suspensions, restorations under review, and active membership. Status changes can unlock or close export corridors worth billions in duty savings; Souvera updates this registry as policy shifts.

AGOA

SUSPENDED

Suspended from AGOA since 2015. Restoration under USTR and congressional review could unlock duty-free access for agriculture, manufacturing, and oil-adjacent value-add exports.

AfCFTA

ACTIVE

54 African countries, 1.3B consumers — continental free trade area

ECOWAS

MEMBER

350M West African regional market

08

Investment Opportunity

Investment opportunity assessment for Nigeria — multi-sector opportunities at structural inflection point.

Nigeria offers multiple entry channels across technology, agriculture, infrastructure, energy, and services. The pillars below summarize where patient capital has the highest structural tailwinds — based on Souvera terminal intelligence, not generic emerging-market templates.

Each opportunity area includes specific sub-themes (fintech, value-add agriculture, power, logistics) with quantified market gaps where available. Investors should cross-reference Risk Assessment and Market Access sections before sizing commitments.

> Nigeria represents a major economy at a structural inflection point, offering multi-sector investment opportunities across technology, agriculture, infrastructure, and financial services.

Investment Pillars

Technology Sector

Africa's Leading Tech Hub

Nigeria's technology ecosystem has reached critical mass, with Lagos emerging as Africa's leading tech hub. The fintech sector processed $40 billion in transactions in 2025, with mobile money penetration exceeding 60% of adults.

- Fintech infrastructure: Payment gateways, lending platforms, digital banking
- AgriTech: Supply chain digitization, farmer financing, logistics optimization
- EdTech: Online learning platforms serving 45 million school-age population
- E-commerce: Last-mile delivery, warehousing, B2B marketplaces

Agricultural Value-Add

$10B Import Substitution Play

Nigeria is Africa's largest agricultural producer but imports $10 billion in processed food annually. Massive opportunity in value-added processing and export-oriented agriculture.

- Cassava processing: 60M tons/year production, minimal value-add exports
- Cocoa value chain: 3rd largest producer, 70% exported raw
- Rice milling: Closing $2B import gap
- Cold chain infrastructure: 95% of post-harvest losses preventable

Infrastructure Development

$15B Pipeline (2025-2028)

$15 billion infrastructure pipeline from 2025-2028 across power, transport, and housing sectors, driven by urbanization and economic growth.

- Power generation: Targeting 25GW by 2030
- Port modernization: Lekki Deep Sea Port Phase 2 expansion
- Rail infrastructure: Lagos-Kano standard gauge railway
- Housing: 20M unit deficit, urbanization at 3.5%/year

Investment Entry Points

Investment entry points describe how foreign capital typically enters the market — through local partnerships, private equity, greenfield development, or public markets. Each channel below is explained for readers unfamiliar with local capital markets or regulatory pathways.

Joint Ventures

Partner with Nigerian conglomerates like Dangote, BUA, Flour Mills for established market access and operational expertise A joint venture pairs your capital and expertise with a local partner who holds licenses, land access, distribution networks, and government relationships. For first-time entrants, JVs reduce regulatory friction and accelerate time-to-revenue compared to wholly owned subsidiaries.

Private Equity

Mid-market tech companies at Series B-C stage with proven business models and regional expansion potential Private equity invests in established companies with proven revenue — typically Series B through pre-IPO — rather than building operations from scratch. This channel suits investors seeking growth equity exposure without day-to-day operational burden.

Greenfield Projects

Special Economic Zones offering tax holidays and repatriation guarantees for new manufacturing/assembly operations Greenfield investment means building new facilities on undeveloped sites — factories, warehouses, or processing plants. Special Economic Zones often bundle tax incentives, customs clearance, and repatriation guarantees for greenfield exporters.

Listed Equities

Nigerian Stock Exchange (NSE) provides liquidity for blue-chip exposure across banking, consumer goods, and industrial sectors Public markets provide liquid exposure to blue-chip local companies. Exchange-listed equities suit portfolio investors who want tradable positions rather than illiquid private stakes.

Regional Advantages

Regional advantages quantify access beyond the domestic market — neighboring trade blocs, U.S. preference programs, and workforce scale. These advantages compound domestic returns when export-oriented business models are part of the investment thesis.

ECOWAS Market Access (350M)

West African Economic Community. 350M Regional membership provides duty-free trade with neighboring states and harmonized investment protocols — critical for distribution and regional services plays.

AfCFTA Access (1.3B)

Duty-free African market. 1.3B AfCFTA phases out tariffs on 90% of goods across 54 African countries by 2030, enabling regional manufacturing hubs and pan-African brands.

U.S. Market Access (AGOA)

Restoration opportunity under review. AGOA This regional positioning extends the addressable market beyond domestic borders and should be modeled in export revenue scenarios.

Annual Graduates (200K+)

English-speaking skilled workforce. 200K+ English-speaking graduates support BPO, tech, and professional services outsourcing at competitive cost bases versus North America and Europe.

09

Risk Assessment

Risk assessment for Nigeria — balanced assessment with structural reforms and mitigation frameworks.

Institutional investors require explicit risk taxonomy: macro (currency, inflation, debt), political (governance, security), operational (power, logistics, talent), and sector-specific exposures. Nigeria's profile below follows this structure with severity ratings and mitigants for each factor.

No emerging market is risk-free. The objective is risk-adjusted return — identifying where mitigation tools (insurance, local partners, phased deployment, hard-currency revenue) bring exposures within acceptable bounds for your mandate.

> Nigeria's investment landscape requires a balanced assessment of macro, political, and operational risks. Risks are real but manageable through strategic partnerships and phased capital deployment.

Macro Risks

Currency Volatility

MODERATE

Naira depreciated post-2023 unification (461 → 1,450 NGN/USD by 2025), but volatility stabilized since Q4 2024. CBN maintains $37 billion reserves (6 months import cover).

Mitigants:

- Hedging instruments available
- Hard currency revenue options

Inflation

MODERATE-HIGH

At 18.2% (2025), inflation remains elevated but declining from 24.5% peak (2023). CBN tightening with 18.5% interest rates.

Mitigants:

- Monetary tightening
- Agricultural reforms underway

Debt Sustainability

LOW-MODERATE

Debt-to-GDP at 42.1% (2025) remains below IMF 55% emerging market threshold. External debt service 11% of exports (manageable).

Mitigants:

- Below IMF threshold
- Fiscal reforms improving revenue

Political Risks

Governance & Stability

MODERATE

Nigeria's democracy is mature (25 years, 7 peaceful transitions), but challenges persist: 2027 presidential election watchpoint, security issues (Boko Haram, banditry), corruption rank 145/180.

Mitigants:

- Strong institutions (CBN independence)
- IMF/World Bank oversight

Operational Risks

Power Supply

HIGH IMPACT

Grid instability requires self-generation (diesel/solar), adding 15-25% to operating costs. Lagos/Abuja grids more reliable than national grid.

Mitigants:

- Solar/diesel backup standard
- Power reforms underway

Logistics

MODERATE

Port congestion averages 10-14 days clearance. Road quality variable; Lagos-Abuja corridor is well-maintained.

Mitigants:

- Lekki Deep Sea Port operational
- Infrastructure improvements ongoing

Talent Retention

MODERATE

Brain drain to Europe/U.S./Canada impacts skilled workforce availability, particularly in tech and professional services.

Mitigants:

- Competitive salaries retain talent
- Equity participation effective

Mitigation Strategies

Mitigation strategies translate risk awareness into actionable frameworks. Each strategy below describes how institutional investors typically de-risk capital deployment — with specific instruments, partners, and sequencing recommendations. These are standard practices among DFIs, private equity sponsors, and multinational corporates operating in frontier and emerging markets.

Local Partnerships

Partner with established Nigerian conglomerates (Dangote, BUA, Flour Mills) for political relationships, supply chains, and operational expertise. Select partners with audited financials, export track records, and government relations depth. Structure governance rights, exit clauses, and anti-corruption covenants in shareholder agreements before capital injection.

Insurance Products

Utilize political risk insurance, currency hedging, and credit insurance from MIGA, DFC, Afreximbank, or private insurers to protect capital. MIGA and DFC cover expropriation and currency inconvertibility; private insurers offer contract frustration and trade credit coverage. Premium costs typically run 1–3% of insured value — material but often required by lender covenants.

Revenue Diversification

Balance domestic and export markets to hedge currency risk. Hard currency revenue streams (exports, diaspora) offset naira volatility. Model scenarios where 30–50% of revenue is hard-currency (exports, offshore clients, diaspora remittance-linked demand) to offset local-currency depreciation on operating costs and dividends.

Phased Capital Deployment

De-risk through pilot phases: Start with small-scale operations, validate business model, then scale based on demonstrated ROI. Phase 1: pilot with capped exposure and KPI gates. Phase 2: scale on proven unit economics. Phase 3: full deployment with institutional debt or PE co-investment. This sequencing limits downside while preserving optionality.

Risk-Adjusted Outlook

Nigeria's risk-adjusted returns remain compelling for investors with 5-7 year horizons and operational flexibility. The combination of $575B economy scale, structural reforms, and proven risk mitigation frameworks creates an attractive risk-reward profile for patient capital.

10

Signal Scan & Souvera Edge

Souvera Signal Scan synthesizes macro momentum, FDI, inflation, and sector leadership into an actionable badge.

Emerging · Reform momentum

- FDI inflows $4.5B (2025)
- Technology & Software leading sector strength

Investment Window: Institutional investors who enter now—while inflation is declining and FDI is ramping—stand to capture outsized returns as the market matures within 24-36 months.

Differentiators vs static country briefs: live data refresh, trade policy legislative tracking, sector S/G/A scorecards, and quota-managed AI custom briefs grounded in this same intelligence foundation.

What Bloomberg & Afreximbank Briefs Don't Include

Live Signal Scan — updated with macro and sector inputs, not annual PDF refresh cycles

Market Access Registry — AGOA restoration/suspension, AfCFTA, ECOWAS, CBI, CARICOM in one view

Trade Policy Intelligence — legislative tracker and export opportunity mapping

Terminal-to-PDF parity — this report mirrors the seven country intelligence tabs

AI Custom Briefs — query-driven reports grounded in Souvera data (Business+ quota)

Sources: World Bank, IMF, UN Comtrade, Souvera Curated Intelligence
Methodology: Terminal tab content, Souvera data foundation, World Bank, IMF, UN Comtrade. Regenerate from the Reports tab for the latest refresh. Verify material facts independently before investment decisions.
